PROFILE

Senior Software Engineer with 5+ years of experience building cross-platform products in fintech, analytics, and enterprise software. I specialise in Flutter, ReactJS, Node.js, Python, and Golang and I'm most at home at the intersection of mobile and backend, where I can own both ends of a feature. At KPMG Africa, I led the development of a fintech platform now used by 10,000+ users. I care about clean architecture, reliable systems, and leaving codebases better than I found them.

CORE TECHNICAL SKILLS

- **Mobile Development:** Flutter (iOS & Android), Stacked Architecture, Riverpod, Bloc, Firebase, REST APIs, Local Storage
- **Frontend:** ReactJS, TypeScript, Tailwind CSS, Redux, Component Architecture, Responsive UI
- **Backend:** Node.js (Express.js), Golang (Gin, Fiber), Python(Django) PostgreSQL, MongoDB, Redis, JWT, OAuth 2.0
- **DevOps & Tools:** GitHub Actions, Azure DevOps, Jenkins, Firebase Crashlytics, PM2, Postman
- **Architecture & Practices:** Microservices, MVC, MVVM, SOLID, Clean Architecture, TDD, Agile, CI/CD pipelines

PROFESSIONAL EXPERIENCE

Software Engineer (Contract) — Mind2Matter | Dec 2024 – Present | United States

- Led a team of 4 mobile engineers to build a telehealth application from scratch using Flutter, delivering across iOS, Android, and Web, collaborating closely with a separate backend team on API integration and data flows.
- Owned the Flutter codebase across all three platforms, ensuring consistent UX, shared business logic, and clean separation between the mobile layer and backend services.
- Built a full-featured ERP web dashboard using React, covering HR, procurement, and staff management, giving organisations a single platform to run their internal operations..
- Maintained clean architecture and reusable component standards across both projects, keeping codebases scalable and easy for the team to work in.

Software Engineer — KPMG Africa | Sept 2023 – Present | Lagos

- Led the end-to-end design and development of a cross-platform fin-tech solution using Flutter and Node.js, empowering over 10,000 users to manage budgets, savings, and goals seamlessly.
- Architected modular API services with Express.js and PostgreSQL, implementing secure OAuth 2.0 authentication and AES encryption in compliance with GDPR standards.
- Designed and owned the CI/CD pipeline for mobile app deployment using GitHub Actions, cutting manual release effort and enabling consistent, automated delivery across environments.
- Delivered multiple ReactJS admin dashboards for internal analytics and reporting, giving stakeholders real-time visibility into operations and reducing reliance on manual reporting.
- Integrated real-time monitoring and performance logging to ensure optimal stability and response times across systems.
- Mentored 5 junior engineers through code reviews, architectural guidance, and hands-on pairing, improving team delivery speed and raising the overall bar for code quality.

Mobile Application Developer (Contract, Remote) — Woo Life Ltd | May 2023 – July 2023 | Canada

- Joined a team of 3 engineers to improve Woo Your Boo, a couples' relationship app designed to help partners stay connected and keep the romance alive.
- Improved app responsiveness and animations on an existing Flutter codebase, and established unit and widget tests to lock in stability for key modules.
- Collaborated remotely with a distributed team to ship iterative UI/UX improvements across sprint cycles, adapting quickly to an existing codebase with minimal ramp-up time.

Software Engineer — TechTink Solutions Ltd | July 2022 – Mar 2023 | Abuja

- Solely built the mobile side of a foodstuff e-commerce application in Flutter from scratch, working alongside a backend engineer to deliver a full shopping experience across iOS and Android.
- Contributed new features to an Electronic Medical Records (EMR) platform for a hospital client, working carefully in a sensitive, production healthcare system with real patient data.
- Applied MVVM and Riverpod architecture across both projects, building reusable UI components and handling RESTful API integration with optimised payload management for data-heavy screens.

- Drove agile practices and code review standards within the team, improving sprint predictability and overall delivery quality.

Mobile Application Developer — Kwikpay Credit | Aug 2021 – Mar 2022 | Lagos

- Co-built a loan application from scratch in Flutter with one other engineer, owning the mobile side end-to-end from architecture to App Store and Play Store delivery.
- Implemented Firebase-based authentication and data sync, with offline-capable features to ensure the app remained usable for customers in low-connectivity regions.
- Worked closely with product designers to shape a lending experience that felt intuitive and trustworthy, contributing to strong early user engagement after launch.

Software Developer — WorkFlowLink Tech. Ltd | Jan 2020 – Jul 2021 | Abuja

- Maintained and improved existing client applications, handling bug fixes, feature additions, and performance improvements across multiple live products.
- Occasionally led greenfield builds for clients, taking apps from zero to delivery while juggling ongoing maintenance responsibilities.
- Introduced version control and CI practices to the team, replacing adhoc workflows with a more structured, collaborative development process.

EDUCATION

Federal University of Technology, Akure — Bachelor of Technology (B.Tech) in Remote Sensing and GIS | 2021

ALX Africa — Backend Development (March 2024 – Sept 2024): Advanced backend architecture, Golang, and Python(Django)
